There are a lot of common commands in Python and Git that I need to use very often but can easily forget them. This is my notebook to help me remember them.

## 1 Python

## 2 Git

- add all new files: `git add .`
- add all updated old files: `git add -u`
- pull updates from remote branch main: `git pull origin main`

### 2.1 vim

- quit vim: `:q`
